◆ Eye Dragon (information receiving equipment for the hearing impaired) ◆

Provides information for the hearing impaired at times of disaster.

Eye Dragon is "TV to listen to with your eyes". At times of disaster, the optical alarms will flash and emergency disaster broadcasts will be played. Real-time subtitles and sign language translation are offered for disaster news etc., and is available at certain regional centers.

Disability Services Division, Higashihiroshima City Office
Phone 082-420-1080 Fax 082-420-0181

◆ AED (automated external defibrillator) ◆

If someone has collapsed: Resuscitation using AED

Even if a person passes out, the chances of survival are high if proper treatment is given quickly. "Cardiopulmonary resuscitation", which is performed while waiting for an ambulance after calling the fire station at 119, is extremely important. Resuscitation using electric shock is a very effective first-aid method to save the life of the sick and wounded in cardiac arrest. AED (automated external defibrillator) is a machine that automatically checks the rhythm of the sick and wounded's heart and suggests the required steps with audio messages. Make an effective use of the AED if you see it near you.

How to use the AED (universal AED)

- 1) Turn the power on
- 2) Check where to attach the pads and attach.
- 3) Follow the audio message (instruction).

This sign indicates the location of the AED.
