Following are the differences between the May 2021 hazard map and this one:

	This time	May 2021
Assumptions for flooding	Heavy rain about once every 1,000 years	Heavy rain about once every 100 years
Rivers with inundation-assumed zones	Rivers above certain size	Kurose River, Nuta River, Nuno River, Mitsuokawa River, part of Nukunashi River
Past disaster records	Storm rainfall of June 29, 1999, Storm rainfall of July 2018	(not listed here)

Map legend

Evacuation Centers

- First-opened designated evacuation centers
- Other designated evacuation centers
- Safety evacuation area (mudslide)
- Landslide disaster caution zone (rapid slope)
- Landslide disaster special caution zone (rapid slope)
- Landslide disaster special caution zone (earth slide)
- Landslide disaster special caution zone (rapid slope)

Landslide disaster caution zone (yellow zone)
A caution zone refers to the area of a land where risks to harm the residents' lives or bodies are recognized at times of landslide disaster.

Landslide disaster special caution zone (red zone)
A special caution zone refers to the area within the caution zone where risks to damage the buildings and harm the residents' lives or bodies are recognized at times of landslide disaster. In such a zone, certain developments are restricted and building construction restriction regulations apply.

Inundation height caused by flood

- 20m or more zone
- 10m-under 20m zone
- 5m-under 10m zone
- 3m-under 5m zone
- 0.5m-under 3m zone
- under 0.5m zone

Indication of assumed inundation height

- 20m or more
- 20m (Inundation of two-story building)
- 10m (Inundation up to above 2nd floor ceiling)
- 5m (Inundation up to 2nd floor ceiling)
- 3m (Inundation up to 1st floor ceiling)
- 0.5m (Up to under the floorboards of the 1st floor)

Other Symbols:

- City office / branch office
- National/prefectural facilities
- Police station
- Police box / residential police box
- Fire station
- Fire station branch office
- Water level station
- Precipitation station
- River surveillance camera
- Emergency water supply center
- Expressway
- National road
- Major local road
- General prefectural road
- Railway
- Regional border

Earth slides
A phenomenon in which rain and snow runoff seep into the underground and cause intermittent slope slides.

Cliff failure
A phenomenon in which a slope suddenly collapses due to rain, snow runoff, or an earthquake.

Mudslide
A phenomenon in which stones, earth and sand of the mountains and rivers get together with water due to heavy rain etc. and make an intense stream.
