〔開削工法〕

溝を掘って污水管渠を埋めます。
溝堀部は毎日、仮舗装して復旧します。

The diagram illustrates the open-cut method for installing a sewerage system. It shows a cross-section of a road (道路(舗装)) and a residential area (民地) separated by a boundary (官民境界). A sewerage pipe (污水管渠) is shown running horizontally. A section of the road is marked as '仮舗装' (temporary paving). A vertical line indicates the '官民境界' (boundary between official and private land). A '公共ます' (public manhole) is shown on the right side of the road. A '取付管' (connection pipe) is shown connecting the sewerage pipe to the manhole. The distance between the sewerage pipe and the manhole is labeled '1m以内' (within 1m). The diagram also shows a '溝' (trench) being dug to install the sewerage pipe, with a note indicating that the trench is filled and temporarily paved daily.
